Starting a youtube channel to teach chemistry related hydroponic skills

The ScienceInHydroponics blog has been a great place to share my knowledge and experience in hydroponics during the last 11 years. However, the world has changed a lot since then and video has now become easier to produce and a better way to share a lot of practical content. For this reason I have decided to start the Chemisting youtube channel where I will be sharing chemistry related content. For starters this will be mostly about practical skills in hydroponics — things like properly measuring large and small volumes, properly preparing stock solutions, taking care of electrodes, etc — but it will be expanded with videos on other topics that might eventually be outside of the realm of hydroponic culture.

The following is our first video — my wife has been instrumental in creating this channel and the video — where I share the proper technique to prepare a concentrated solution at a small scale. The video shows how to accurately measure volume and weight and how to carry out the transferring processes necessary. Please don't forget to like, subscribe, share and suggest any topics you would like to see in future videos!

The Scienceinhydroponics blog will continue to be updated frequently though, as I continue to enjoy sharing blog articles with hydroponic growers around the world!
